

Comprehensive Flood Gauge Analysis Report

Gauge ID: GAUGE-91dc4ba6

Report Date: 2025-06-20

Gauge Overview

Gauge Information	Value
Gauge ID	GAUGE-91dc4ba6
Gauge Name	Thames Southwark Gauge 8

Gauge Summary

Key Attribute	Value
Gauge Type	Ultrasonic gauge
Gauge Owner	Thames Water
Manufacturer	Stevens Water
Status	Temporarily offline
Certification	Fully certified
Historical High (m)	5.58
Flood Alert Level (m)	3.346 m
Flood Warning Level (m)	4.462 m
Gauge Age	2 years

Sensor Details and Hardware Specifications

Gauge ID: GAUGE-91dc4ba6

Gauge Information

Gauge Specification	Value
Data Source Type	SensorGauge
Gauge Owner	Thames Water
Gauge Type	Ultrasonic gauge
Manufacturer Name	Stevens Water
Installation Date	2023-06-21
Last Inspection Date	2024-10-02
Maintenance Schedule	Monthly
Operational Status	Temporarily offline
Certification Status	Fully certified

Location Information

Location Attribute	Value
Latitude	51.475000
Longitude	-0.221400
Ground Level (m)	7.910 m

Measurement Configuration

Measurement Parameter	Configuration
Measurement Frequency	30 minutes
Measurement Method	Automatic
Data Transmission	Automatic
Data Curator	Centre for Ecology & Hydrology
Data Access Method	WebInterface

Historical Sensor Statistics

Statistical Measure	Value
---------------------	-------

Historical High Level (m)	5.577 m
Date of Historical High	2024-09-23
Last Severe Level Exceeded	2021-06-23
Frequency of Severe Level Exceedance	1 times

Geographic Location and Context

Gauge ID: GAUGE-91dc4ba6

Geographic Coordinates

Geographic Parameter	Value
Latitude	51.475000°
Longitude	-0.221400°
Ground Level Elevation	7.910 m above sea level

Thames River Context

Thames Parameter	Value
Distance to Thames	On Thames River

Location-Based Flood Risk Assessment

Risk Parameter	Assessment
Flood Risk Score	8/10
Risk Category	Very High
Last Assessment Date	2024-11-11

Gauge Positioning Summary

Position Attribute	Description
Regional Position	Central London area
River Position	Directly on Thames River
Location Risk Profile	Very High flood risk location

Current Measurements and Operational Status

Gauge ID: GAUGE-91dc4ba6

Measurement Configuration

Measurement Parameter	Configuration
Measurement Frequency	30 minutes
Measurement Method	Automatic
Data Transmission	Automatic
Data Curator	Centre for Ecology & Hydrology
Data Access Method	WebInterface

Gauge Operational Status

Status Parameter	Current State
Operational Status	Temporarily offline
Certification Status	Fully certified
Last Inspection	2024-10-02
Maintenance Schedule	Monthly

Historical Measurement Statistics

Statistical Measure	Value
Historical High Level	5.577 m
Date of Historical High	2024-09-23
Last Severe Level Exceeded	2021-06-23
Severe Level Exceedance Frequency	1.000 m

Current Readings

No current timeseries data available for real-time readings.

Flood Stages and Alert Thresholds

Gauge ID: GAUGE-91dc4ba6

UK Flood Stage Thresholds

Alert Level	Threshold (m)	Authority
Flood Alert	3.346 m	Natural Resources Wales
Flood Warning	4.462 m	Natural Resources Wales
Severe Flood Warning	5.298 m	Natural Resources Wales

Threshold Analysis

Analysis Parameter	Value
Alert to Warning Range	1.115 m
Warning to Severe Range	0.837 m
Total Alert Range	1.952 m
Decision Authority	Natural Resources Wales

Historical Threshold Exceedance

Exceedance Parameter	Historical Data
Historical High Level	5.577 m
Date of Historical High	2024-09-23
Last Severe Level Exceeded	2021-06-23
Severe Level Exceedance Count	1.000 m

Current Status vs Thresholds

No current timeseries data available for threshold comparison.

Flood Risk Assessment and Analysis

Gauge ID: GAUGE-91dc4ba6

Overall Risk Profile

Risk Parameter	Assessment
Flood Risk Score	8/10 (Very High Risk)
Risk Category	Very High
Last Assessment Date	2024-11-11
Location Risk Factor	On Thames River (Highest Risk)

Historical Risk Patterns

Historical Pattern	Analysis
Severe Level Frequency	One severe level exceedance (Low frequency)
Historical High Level	5.577m (Exceeded severe warning level)
Recent Activity	No recent severe activity (4 years ago)

Threshold Risk Analysis

Threshold Analysis	Risk Assessment
Alert Range Analysis	Moderate alert range (1.115m) - Standard escalation
Historical vs Threshold	Historical high exceeds severe level by 0.279m (Elevated risk)

Current Risk Status

No current timeseries data available for real-time risk assessment.

Comprehensive Data Summary

Thames Southwark Gauge 8 (GAUGE-91dc4ba6)

Gauge Overview Summary

Summary Parameter	Value
Gauge Type	Ultrasonic gauge
Manufacturer	Stevens Water
Operational Status	Temporarily offline
Installation Date	2023-06-21
Latitude	51.475000°
Longitude	-0.221400°

Key Metrics Summary

Key Metric	Value	Significance
Historical High Level	5.577 m	Exceeds severe warning
Flood Alert Level	3.346 m	Initial warning threshold
Severe Warning Level	5.298 m	Critical action required
Flood Risk Assessment	8/10 (Very High)	Overall location risk
Severe Level Exceedances	1 times	Low frequency events

Operational Status Summary

Operational Parameter	Status
Current Status	Temporarily offline
Certification	Fully certified
Measurement Frequency	30 minutes
Data Transmission	Automatic
Maintenance Schedule	Monthly

Report Conclusions

- Low flood risk location with routine monitoring sufficient
- Limited historical severe flood events indicate stable conditions
- Gauge meets certification standards for reliable flood monitoring

Report completed: 2025-06-20 08:37 - MKM Research Labs
