

Portfolio Flood Risk Assessment: Model Inputs

Technical Documentation Team

February 27, 2026

1 Required Input Data

1.1 Property Portfolio Data

Field	Type	Description
property_id	string	Unique identifier
latitude	float	Property latitude
longitude	float	Property longitude
value	float	Current market value
floor_height	float	Height above ground
property_age	float	Age in years
lot_area	float	Total area in m ²
living_space	float	Living area in m ²
bedrooms	integer	Number of bedrooms
bathrooms	integer	Number of bathrooms

1.2 Sales History Data

Field	Type	Description
last_purchase_date	date	Date of last sale
last_purchase_value	float	Previous sale price
material_building_work	boolean	Renovation flag
building_work_date	date	Renovation date
building_work_cost	float	Renovation cost

1.3 Flood Event Parameters

Parameter	Type	Description
center_lat	float	Event center latitude
center_lon	float	Event center longitude
radius	float	Affected radius (m)
max_depth	float	Maximum flood depth (m)

2 Optional Input Data

2.1 Gauge Data

Field	Type	Description
gauge_id	string	Unique identifier
latitude	float	Gauge latitude
longitude	float	Gauge longitude
water_level	float	Current level (m)
